Sandwich classification for classical-like groups over commutative rings

Raimund Preusser

University of Brasilia

Throughout this talk R denotes an associative, commutative ring with $1 \neq 0$ and $n \geq 3$ a natural number. The following theorem is known as Sandwich Classification Theorem.

Throughout this talk R denotes an associative, commutative ring with $1 \neq 0$ and $n \geq 3$ a natural number. The following theorem is known as Sandwich Classification Theorem.

Theorem (Wilson-Golubchik, 1972/73)

Let H be a subgroup of $GL_n(R)$. Then H is normalized by $E_n(R)$ iff

$$E_n(R, I) \subseteq H \subseteq C_n(R, I)$$

for some ideal I of R.

Throughout this talk R denotes an associative, commutative ring with $1 \neq 0$ and $n \geq 3$ a natural number. The following theorem is known as Sandwich Classification Theorem.

Theorem (Wilson-Golubchik, 1972/73)

Let H be a subgroup of $GL_n(R)$. Then H is normalized by $E_n(R)$ iff

$$E_n(R, I) \subseteq H \subseteq C_n(R, I)$$

for some ideal I of R.

The ideal I in the theorem above is uniquely determined, namely

$$I = I(H) := \{x \in R \mid t_{kl}(x) \in H \text{ for some } k \neq l\}.$$

Let $\sigma \in GL_n(R)$ and set $H := {}^{E_n(R)}\langle \sigma \rangle$, i.e. H is the smallest subgroup of $GL_n(R)$ which contains σ and is normalized by $E_n(R)$. By the Sandwich Classification Theorem one has $H \subseteq C_n(R, I)$ where $I = I(H)$. That amounts to saying that for any $i \neq j$ and $k \neq l$ the matrices $t_{kl}(\sigma_{ij})$ and $t_{kl}(\sigma_{ii} - \sigma_{jj})$ can be expressed as products of matrices of the form ${}^{\epsilon}\sigma^{\pm 1}$ where $\epsilon \in E_n(R)$.

Let $\sigma \in GL_n(R)$ and set $H := {}^{E_n(R)}\langle\sigma\rangle$, i.e. H is the smallest subgroup of $GL_n(R)$ which contains σ and is normalized by $E_n(R)$. By the Sandwich Classification Theorem one has $H \subseteq C_n(R, I)$ where $I = I(H)$. That amounts to saying that for any $i \neq j$ and $k \neq l$ the matrices $t_{kl}(\sigma_{ij})$ and $t_{kl}(\sigma_{ii} - \sigma_{jj})$ can be expressed as products of matrices of the form ${}^{\epsilon}\sigma^{\pm 1}$ where $\epsilon \in E_n(R)$.

Problem: Find such expressions of the matrices $t_{kl}(\sigma_{ij})$ and $t_{kl}(\sigma_{ii} - \sigma_{jj})$ with a small number of factors.

Definition

$GL_n(R) := M_n(R)^*$ is called *general linear group*.

Definition

$GL_n(R) := M_n(R)^*$ is called *general linear group*.

Theorem

Let I *be an ideal of* R. *Then the Standard Commutator Formulas*

$$[C_n(R, I), E_n(R)] = [E_n(R, I), E_n(R)] = E_n(R, I)$$

hold.

Definition

Let $\sigma \in GL_n(R)$. Then a matrix of the form ${}^{\epsilon}\sigma^{\pm 1}$ where $\epsilon \in E_n(R)$ is called an *elementary* σ*-conjugate*.

Definition

Let $\sigma \in GL_n(R)$. Then a matrix of the form ${}^{\epsilon}\sigma^{\pm 1}$ where $\epsilon \in E_n(R)$ is called an *elementary σ-conjugate*.

Theorem (RP, 2017)

Let $\sigma \in GL_n(R)$, $i \neq j$ and $k \neq l$. Then

(i) *$t_{kl}(\sigma_{ij})$ is a product of 8 elementary σ-conjugates and*

(ii) *$t_{kl}(\sigma_{ii} - \sigma_{jj})$ is a product of 24 elementary σ-conjugates.*

Definition

Let $\sigma \in GL_n(R)$. Then a matrix of the form ${}^{\epsilon}\sigma^{\pm 1}$ where $\epsilon \in E_n(R)$ is called an *elementary σ-conjugate*.

Theorem (RP, 2017)

Let $\sigma \in GL_n(R)$, $i \neq j$ and $k \neq l$. Then

(i) *$t_{kl}(\sigma_{ij})$ is a product of 8 elementary σ-conjugates and*

(ii) *$t_{kl}(\sigma_{ii} - \sigma_{jj})$ is a product of 24 elementary σ-conjugates.*

Proof.

(i) One checks easily that

$$[t_{12}(1), {}^{\tau^{-1}}[t_{32}(1), [\tau, \sigma]]] = t_{32}(\sigma_{23})$$

where $\tau = t_{21}(-\sigma_{23})t_{31}(\sigma_{22})$.

Definition

Let $\sigma \in GL_n(R)$. Then a matrix of the form ${}^{\epsilon}\sigma^{\pm 1}$ where $\epsilon \in E_n(R)$ is called an *elementary σ-conjugate*.

Theorem (RP, 2017)

Let $\sigma \in GL_n(R)$, $i \neq j$ and $k \neq l$. Then

(i) $t_{kl}(\sigma_{ij})$ *is a product of* 8 *elementary σ-conjugates and*

(ii) $t_{kl}(\sigma_{ii} - \sigma_{jj})$ *is a product of* 24 *elementary σ-conjugates.*

Proof.

(i) One checks easily that

$$[t_{12}(1), {}^{\tau^{-1}}[t_{32}(1), [\tau, \sigma]]] = t_{32}(\sigma_{23})$$

where $\tau = t_{21}(-\sigma_{23})t_{31}(\sigma_{22})$. This implies that $t_{32}(\sigma_{23})$ is a product of 8 elementary σ-conjugates. Using the fact that $E_n(R)$ contains certain monomial matrices one can deduce (i).

(ii) Clearly the entry of ${}^{t_{ji}(1)}\sigma$ at position (j,i) equals $\sigma_{ii}-\sigma_{jj}+\sigma_{ji}-\sigma_{ij}$.

(ii) Clearly the entry of ${}^{t_{ji}(1)}\sigma$ at position (j,i) equals $\sigma_{ii}-\sigma_{jj}+\sigma_{ji}-\sigma_{ij}$. Applying (i) to ${}^{t_{ji}(1)}\sigma$ one gets that $t_{kl}(\sigma_{ii}-\sigma_{jj}+\sigma_{ji}-\sigma_{ij})$ is a product of 8 elementary σ-conjugates (clearly any elementary ${}^{t_{ji}(1)}\sigma$-conjugate is also an elementary σ-conjugate).

(ii) Clearly the entry of ${}^{t_{ji}(1)}\sigma$ at position (j,i) equals $\sigma_{ii}-\sigma_{jj}+\sigma_{ji}-\sigma_{ij}$. Applying (i) to ${}^{t_{ji}(1)}\sigma$ one gets that $t_{kl}(\sigma_{ii}-\sigma_{jj}+\sigma_{ji}-\sigma_{ij})$ is a product of 8 elementary σ-conjugates (clearly any elementary ${}^{t_{ji}(1)}\sigma$-conjugate is also an elementary σ-conjugate). Applying (i) to σ one gets that $t_{kl}(\sigma_{ij}-\sigma_{ji})=t_{kl}(\sigma_{ij})t_{kl}(-\sigma_{ji})$ is a product of 16 elementary σ-conjugates.

(ii) Clearly the entry of ${}^{t_{ji}(1)}\sigma$ at position (j,i) equals $\sigma_{ii}-\sigma_{jj}+\sigma_{ji}-\sigma_{ij}$. Applying (i) to ${}^{t_{ji}(1)}\sigma$ one gets that $t_{kl}(\sigma_{ii}-\sigma_{jj}+\sigma_{ji}-\sigma_{ij})$ is a product of 8 elementary σ-conjugates (clearly any elementary ${}^{t_{ji}(1)}\sigma$-conjugate is also an elementary σ-conjugate). Applying (i) to σ one gets that $t_{kl}(\sigma_{ij}-\sigma_{ji})=t_{kl}(\sigma_{ij})t_{kl}(-\sigma_{ji})$ is a product of 16 elementary σ-conjugates. It follows that $t_{kl}(\sigma_{ii}-\sigma_{jj})=t_{kl}(\sigma_{ii}-\sigma_{jj}+\sigma_{ji}-\sigma_{ij})t_{kl}(\sigma_{ij}-\sigma_{ji})$ is a product of 24 elementary σ-conjugates. □

Corollary

Let H be a subgroup of $GL_n(R)$. Then H is normalized by $E_n(R)$ iff

$$E_n(R, I) \subseteq H \subseteq C_n(R, I) \tag{1}$$

for some ideal I of R.

Corollary

Let H be a subgroup of $GL_n(R)$. Then H is normalized by $E_n(R)$ iff

$$E_n(R,I) \subseteq H \subseteq C_n(R,I) \tag{1}$$

for some ideal I of R.

Proof.

$(\Rightarrow)$ Suppose that H is normalized by $E_n(R)$. Set $I = I(H)$. Then clearly $E_n(R,I) \subseteq H$. Let $\sigma \in H$, $i \neq j$ and $k \neq l$. By the previous theorem, $T_{kl}(\sigma_{ij})$ and $T_{kl}(\sigma_{ii} - \sigma_{jj})$ are products of matrices of the form ${}^{\epsilon}\sigma^{\pm 1}$ where $\epsilon \in E_n(R)$. Hence $T_{kl}(\sigma_{ij}), T_{kl}(\sigma_{ii} - \sigma_{jj}) \in H$ which implies $\sigma_{ij}, \sigma_{ii} - \sigma_{jj} \in I$. Thus $H \subseteq C_n(R,I)$.

Corollary

Let H be a subgroup of $GL_n(R)$. Then H is normalized by $E_n(R)$ iff

$$E_n(R,I) \subseteq H \subseteq C_n(R,I) \tag{1}$$

for some ideal I of R.

Proof.

($\Rightarrow$) Suppose that H is normalized by $E_n(R)$. Set $I = I(H)$. Then clearly $E_n(R,I) \subseteq H$. Let $\sigma \in H$, $i \neq j$ and $k \neq l$. By the previous theorem, $T_{kl}(\sigma_{ij})$ and $T_{kl}(\sigma_{ii} - \sigma_{jj})$ are products of matrices of the form ${}^{\epsilon}\sigma^{\pm 1}$ where $\epsilon \in E_n(R)$. Hence $T_{kl}(\sigma_{ij}), T_{kl}(\sigma_{ii} - \sigma_{jj}) \in H$ which implies $\sigma_{ij}, \sigma_{ii} - \sigma_{jj} \in I$. Thus $H \subseteq C_n(R,I)$.
($\Leftarrow$) Suppose that (1) holds for some ideal I. Then

$$[H, E_n(R)] \subseteq [C_n(R,I), E_n(R)] = E_n(R,I) \subseteq H.$$

Hence H is normalized by $E_n(R)$. □

Definition

Set $V := R^{2n}$. We consider V as right R-module and use the indexing $(e_1, \dots, e_n, e_{-n}, \dots, e_{-1})$ for the elements of the standard basis of V.

Definition

Set $V := R^{2n}$. We consider V as right R-module and use the indexing $(e_1, \dots, e_n, e_{-n}, \dots, e_{-1})$ for the elements of the standard basis of V. Define the quadratic form
